

COMFORT
ZONE
Curve

The Comfort Zone Curve is designed as an economical tool to be used in the prevention and treatment of pressure ulcers.

- Multiple variable size cells allow better contouring to patient anatomy
- Better contouring provides greater reduction of pressure and shear
- Advanced pressure redistribution normally found only in high cost systems
- Single density high specification medical grade foam
- Low friction coefficient cover provides extra shear and friction protection
- Meets federal flammability standards
- Made in the USA

“Varying size cells are cut from a single piece of foam to allow the Curve to conform to the body's natural contour.”

Curve pictured with low shear/friction, moisture resistant cover

Dimensions: 6" x 35" x 80"
Weight Limit: 250 lb.
2 Year Limited Warranty
HCPCS: E0184

Manufactured by Telemade, 3215 Huffman Eastgate, Huffman, TX 77336
