

PREMIERE

Multi-Density, Multi-Zone Pressure Reduction Foam Mattress Replacement

- High specification foam is layered and divided into three pressure zones to provide advanced pressure reduction.
- A memory foam top layer in the foot section provides additional protection for heels.
- High density sides provide a firm surface for transfers.
- Four-way stretch cover further enhances advanced pressure reduction. Low shear, low friction and moisture resistant.
- Durable vinyl base
- Fire barrier sleeve meets CFR16 Part 1633 fire code
- Available with built-in perimeter bolsters (PREMIERE-B)

The PREMIERE is constructed of multiple layers of high specification foam. Multiple density technology allows better contouring to patient anatomy for advanced pressure reduction. To further enhance contouring to patient anatomy the PREMIERE has three pressure zones of differing density foam. The PREMIERE foot section includes a memory foam top layer for extra protection for patient heels. The patient surface is constructed of four-way stretch low friction/shear cover to enhance the advanced pressure reduction capabilities of the foam core. The vinyl base is extremely durable and easy to clean. The PREMIERE and PREMIERE-B, are manufactured with a fire retardant sleeve that meets the new CFR16, 1633 fire code.
